

auditable events in the life of a

single enterprise transaction

simple. smart. solutions.

flexible

*“Your enterprise is as agile as your
most cumbersome system”*

Paul Mockenhaupt
MachenSoft, Inc.

To achieve an agile enterprise, your systems must cooperate. Unfortunately, many were written in an era before agility and interoperability were required.

Proprietary technologies, lack of standards, closed systems, antiquated technologies... all frustrate your attempt to create the agile enterprise your company needs to compete in today's market economy.

The heterogeneous mix of systems in most enterprises can have a compounding and crippling effect. Many companies have been driven to the point of accepting "status quo" as the best that can be achieved.

MachenSoft ESBUS can provide an unprecedented level of flexibility, even to the most antiquated, closed systems. ESBUS allows your company to become a truly "*agile enterprise*".

MachenSoft, Inc. now offers the ESBUS Solution to help organizations meet the challenges of extending the purpose of their enterprise applications. With available modules for Integration, Auditing, Workflow, Session Management and Extensibility, ESBUS is the fastest, most flexible way to achieve agility in the enterprise.

actionable

extensible

there's so much

consider

going on...

e·vent *n.* (-v nt)

- *Something that takes place; an occurrence.*
- *A significant occurrence or happening.*
- *A social gathering or activity.*

Mary goes to her computer and brings up Lawson's Portal. Accessing the Employee Maintenance screen (HR11.1), she finds an employee's record and changes the address before heading off to a meeting.

Sounds pretty straight-forward. But if you were using MachenSoft ESBUS, there would have been over a **dozen actionable events** generated that your enterprise could use to audit, integrate, secure, trigger, etc.

Here's a list of just some of the ESBUS generated events from Mary's activities that you could use to *create action – create agility*.

pervasive

standards

Mary's Action	Actionable Event	Possible Use
WorkStation Login	A Windows Security Event is generated for the Login attempt	Global Audit Log for Network Access
Brings up Lawson Portal	Lawson Login attempt	Global Audit Log for System Access, Session Management entry for inactivity timeout
Brings up the HR11.1 Form	Xpress (formdef) Resource Access	Security Check, Form manipulation, Audit Log
Enters a Company	Data Entered	Security Check, Data overrides
Selects a Employee	IDA Resource Access	Security Check, Data manipulation and augmentation, Audit Log
Clicks the Inquire Button	AGS Resource Access	Security Check, Data manipulation and augmentation, Audit Log
Changes Address	AGS Resource Access	Security Check, Data manipulation and augmentation, Audit Log, Real-Time Integration, Workflow Trigger
	Database Update	Security Check, Data manipulation and augmentation, Audit Log, Real-Time Integration, Workflow Trigger
	File System Update (HR11.1 Work file)	Security Check, Data manipulation and augmentation, Audit Log, Real-Time Integration, Workflow Trigger
Closes Portal Window	Session expiration	Global Audit Log for System Access, Session Management removal for inactivity timeout
WorkStation Logoff	A Windows Security Event is generated	Global Audit Log for Network Access

the solution

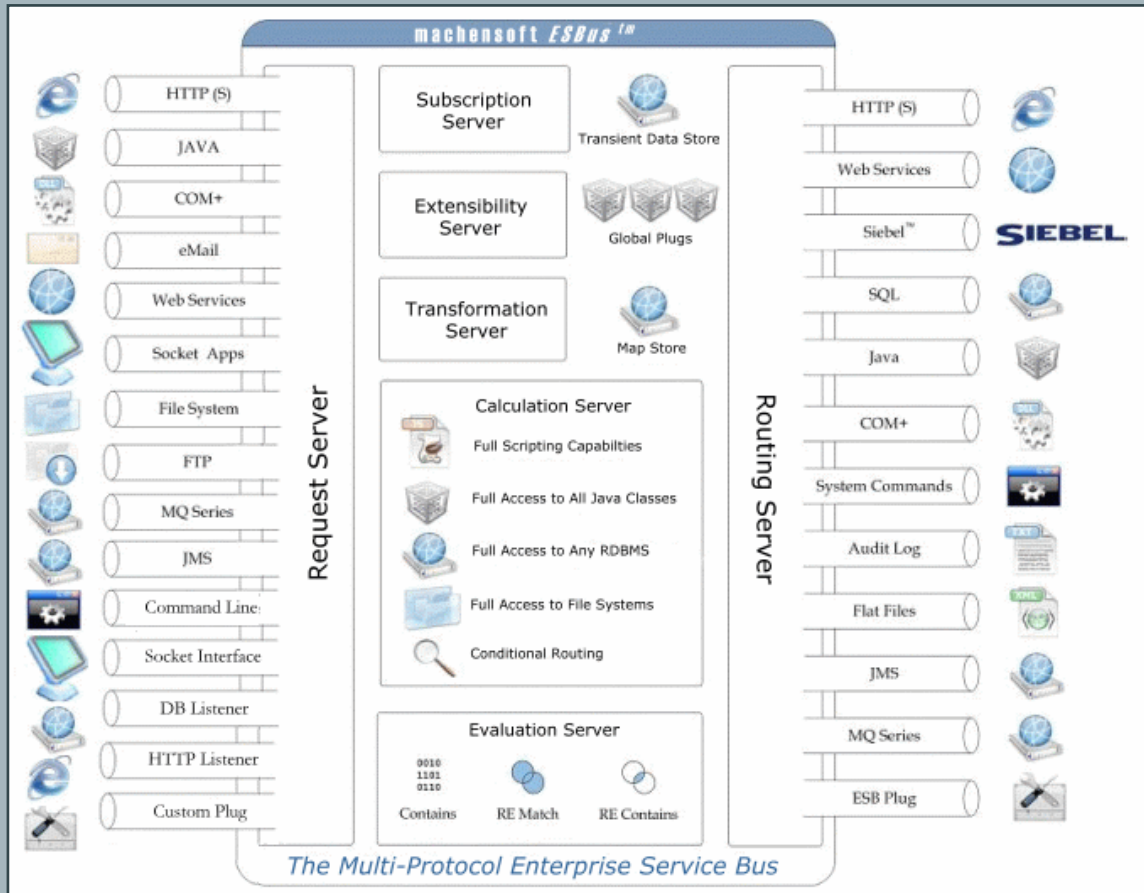

of ESBUS

MachenSoft ESBUS is a revolutionary software suite that is allowing corporations to take control of their enterprise transactions and re-purpose them for auditing, integration, workflow, session management and security. ESBUS provides real-time events from virtually every system and every protocol in use.

With support for the widest range of protocols, MachenSoft ESBUS provides the most comprehensive service bus offering available.
